Hiring Team & Engineering Leadership
Webstacks — Website Operations & Growth Marketing

Date: October 26, 2026
Availability: Full-Time Contractor (40 hrs/week) • **Hours:** PST

> **Application for Software Engineer — React / Next.js / TypeScript + WordPress & Headless CMS**

Dear Webstacks Hiring Team,

I am writing to express my strong enthusiasm for the **Software Engineer** position at **Webstacks**. Having spent over 9 years in web delivery—spanning fast-paced technical agencies, complex client architectures, and the intersection of modern frontend frameworks with robust CMS backends—Webstacks' mission deeply resonates with me. Your commitment to high-performance website operations (WebOps) and treating engineering as the centerpiece of client growth matches how I approach building digital experiences.

Throughout my career as a Senior Developer and Technical Lead, I have specialized in turning ambitious design systems into resilient, high-speed production software. Here is how my background directly aligns with Webstacks:

- **Modern Frontend Engineering & Design System Fidelity:** Extensive production experience building modular, reusable component libraries using **React, TypeScript, Next.js, and modern CSS/SASS**. I collaborate closely with UI/UX designers to translate Figma mockups into pixel-perfect, accessible (WCAG) digital experiences deployed on **Vercel and Cloudflare**, avoiding short-term workarounds in favor of scalable architecture.
- **Bridging WordPress & Headless/Decoupled CMSs:** With 9+ years of deep WordPress engineering (custom Gutenberg blocks with React, ACF Pro, custom plugins, REST APIs) alongside modern headless workflows (Contentful, Sanity, Storyblok, HubSpot), I help teams bridge content architectures into modern decoupled environments without breaking editor workflows or losing data integrity.
- **Performance & Core Web Vitals Obsession:** In agency settings (including *Your Digital Resource* and *Nicasource*), I served as the primary escalation point for diagnosing complex multi-layer caching, database bottlenecks, and asset delivery issues, routinely turning sluggish sites into Grade A performance benchmarks to protect SEO and conversion.
- **Consultative Communication & Agency Ownership:** I am accustomed to working with clients and cross-functional teams to evaluate technical feasibility early, communicate trade-offs transparently, and build reusable component documentation that empowers teammates to execute with speed.

Operating remotely from Managua, Nicaragua (CST / UTC-6), I provide effortless full-day overlap with Pacific Standard Time (PST). I am fully available to dedicate 40 hours per week as a committed contractor, bringing an ego-free, proactive mindset and an eagerness to continually elevate Webstacks' component libraries and client outcomes.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my technical expertise and agency experience can help Webstacks continue delivering best-in-class digital experiences for high-growth tech clients.

Sincerely,

Omar Boza
